

Corona: Five Official Facts

Dezember 2023

Prof. Dr. Stefan Homburg

This document uses short links. If you click on one of the blue links or type it in manually, the official URL will appear in your browser window.

1. All-time low clinic occupancy in 2020

In 2020, clinic occupancy fell to an all-time low, in some cases 30% below the previous year's figure. Link Bundesgesundheitsministerium (p. 4): <https://bitly.ws/32cQN>

2. Few severe respiratory diseases

Respiratory diseases were inconspicuous in 2020 and 2021. Peaks occurred in 2018 and at the end of 2022. Link Robert Koch-Institut (p. 5): <https://bitly.ws/32cSF>

3. Deaths increased noticeably in 2021 not 2020

In 2020, the age-adjusted mortality rate was between the values of 2018 and 2019. It only increased noticeably with the start of vaccination in 2021. Link Gesundheitsberichterstattung des Bundes: <https://bitly.ws/342bx>

4. Corona deaths were older than other deaths

On average, the PCR deaths were 83 years old, the other deaths were 82 years old. Links Robert Koch-Institut (p. 19): <https://bitly.ws/32pqh> und Bundesinstitut für Bevölkerungsforschung: <https://bitly.ws/32cTK>

5. Sweden performed better than Germany

The overall mortality rate per capita was lower in lockdown- and mask-free Sweden than in Germany. Link: World Health Organization: <https://bitly.ws/32sSY>
